

Herman Mark, the man

8

☐The chemist's chemist as perceived by his son, **Hans Mark**.Current practice in
continuing education

12

☐Whose responsibility is the professional growth of the technologist?
Luberoff found out what companies do. Are you benefiting?The effects of society on
technology

19

☐Systems, big and small, determine the course of innovating, says
David.

Water according to Watts

22

☐**Dowsing '82**. Here the controversial **Secretary of the Interior** discusses
our next limiting resource—water.Barriers to thinking new about
energy

24

☐Anthropologist **Nader** suggests some reasons why mega-innovation
comes so slowly.

Chemical warfare—a primer

28

☐Ethical as well as technical challenges abound in **Harris's** exposition.

The healthy workplace

36

☐Monitoring and education are the keys to safety, says **Monroe**.Amphora catalysts:
the shape of things to come

42

☐How a sharp eye and a questioning mind led to new kinds of catalysts is
Herrington's story.

Cogeneration

48

☐The name of the energy game now is "... everything but the squeal"
say **Graybeal** and **Manchester**.Chlorophyll: anatomy of a
discovery

52

☐To learn to mimic nature's solar fixing capabilities we must understand
the chemistry of chlorophylls—and there are many. And their chemistry
fascinates **Rebeiz**.

1 The Industrial Chymist

☐has been on the road again and here's
what he heard.

5 Heart Cut

☐in which **Bisio**, **Kreps**, and **Thyagarajan**
find methane in sewage, nails in variety,
and hope for the obese.

OBC The Last Word

☐

introduces Chief Wo-Wa-Wu.

3 View from the Top

☐in which **Wollner** poses as organizational
climatologist.

39 Well Said

☐in which **Schoenfeld** * ... ? = + !!! @ \$Volume 12, No. 1, pages 1-64 ISSN 0009-2703
CHTEDDPublished monthly by the American Chemical Society from
20th and Northampton Sts., Easton, Pa. 18042. Second-
class postage paid at Washington, D.C., and at additional
offices.**Subscriptions—1-year prices:** Members, \$20; Nonmem-
bers (individual personal use), \$25; Companies, institutions,
libraries, \$100; Students, \$10; Foreign subscribers add \$5
for postage. Send payment to ACS Controller, 1155 16th
St., N.W., Washington, D.C. 20036. Single copies, \$9.
Phone orders can be placed for printed, microfiche, and
microfilm editions by calling, toll free, the sales office at
(1)(800) 424-6747 from anywhere in the continental U.S.
Can use Visa or Master Card.**Editorial matters:** Refer all editorial matters to B. J. Luberoff,
Editor, CHEMTECH, 48 Maple St., Summit, N.J. 07901;
(201) 273-4923.**Advertising:** Centcom, Ltd., T. Koerwer, President, 25
Sylvan Road South, Westport, Conn. 06881; (203) 226-
7131.**Service:** For change of address, send old label with new
address to ACS Membership and Subscription Services,
P.O. Box 3337, Columbus, Ohio 43210. Allow 6 weeks to
effect change. Refer claims for missing issues, information
on status of accounts, etc., to this office. Claims for missing
issues will not be allowed if (a) notice of address change was
not received in specific time; (b) North American claim was
made 90 days beyond issue date; (c) other claim was made
one year beyond issue date.**Disclaimer**—The American Chemical Society assumes no
responsibility for opinions advanced by contributors to its
publications. Views expressed in the editorials are those of
the author and do not necessarily represent the official
position of the Society.**Reproduction:** Permission is granted by the American
Chemical Society to make reprographic copies for personal,
noncommercial, or internal use. This permission does not
extend to copying for promotional purposes, creating new
collective works, resale, or to any material not copyright to
ACS. For details, contact Barbara Friedman, ACS, 1155
16th St., N.W., Washington, D.C. 20036; (202) 872-
4367.

CHEMTech

The Innovator's Magazine JANUARY 1982

- Chemistry trivia** **72** ☐ So you think you know chemistry? HA! **Palermo** will destroy that misconception soon enough.
- The formula for optimum readability** **74** ☐ Seven rules produce terseness . . . to a fault. . . **Silverman** explains.
- Innovation—myths of mice and men** **78** ☐ Seen any pathbeaters lookin' for mouse traps? Neither has **Nissan**.
- The CHEM BOWL** **81** ☐ What **Brown** and colleagues did for kids in Corning, you can do for those near you.
-
- Water is . . .** **84** ☐ **Dowsing '82**
Like beauty, problems and their solutions lie in the eye of the beholder. **Noether** examines the next limiting resource from that viewpoint.
-
- Getting started in personal computing** **91** ☐ Come on now, isn't it time you actually got your hands on a computer? **Press** leads the way.
- Controlled release of macromolecules** **98** ☐ The bigger they are the tougher to move, but **Langer** has effected constant effusion of some big ones—and there's need.
- Hydrogenate CO₂** **108** ☐ Plants do it, use CO₂ to make complex building blocks. **Denise** and **Sneeden** do it, too.
- Chance, necessity, and asymmetric catalysis** **116** ☐ The trick is to make the catalyst chiral, and then use just a bit of it to make lots of chiral compound. That's **Wynberg's** way.
- Aluminum from fly ash** **123** ☐ We don't have much bauxite in the U.S. We'll have a lot more fly ash though. **Felker, Seely, Egan,** and **Kelmers** tell about the exciting Calsinter process for getting aluminum from it.

65 The Industrial Chymist☐ has a hot tip for the last race.**66 Write On**☐ in which there are questions of money, logic, and propriety.**67 Heart Cut**☐ has advice for those who want to lose, learn, love, and make allylphenols or benzofuran derivatives.**70 View from the Top**☐ in which **Coyne** tells Ph.D.s how to become marketers.**106 Guest Editorial**☐ in which **Hahn's** view of the fate of the CPI is . . . foreign.**114 Science of the Possible**☐ in which **Weisz** lifts the hood.**OBC The Last Word**☐ in which **Lord Richie-Calder** searches out sunbeams in the least likely places.

CHEMTECH

The Innovator's Magazine FEBRUARY 1982

Commencement means beginning

136

☐

Setting off on a career, or altering one's course, requires the map **Franklin** provides.

In pursuit of *Larrea*

140

☐

What real industrial chemistry's like—when you're *not* one of Fortune's 500—is illustrated by **Gergel**, who wasn't.

Dowsing '82

Making the desert bloom . . .
at a price

145

☐

Through case histories **Sheridan** shows diverse facets of the water problem.

Saga of a discovery:
alkylation

150

☐

Here's how some good old-fashioned chemistry—alkylation—was done and how it impacted on WW II, told by a good old-fashioned chymist, **Pines**.

Does gatekeeping
make a difference?

156

☐

"He or she who controls the flow of information . . ." "What?" What **Katz** and **Tushman** found, that's what.

"Good Laboratory Practice"

162

☐

What you do and how is no longer a matter of technique, it's a matter of law. **James** lays it down.

Polymer surface chemistry

166

☐

Here's a lecture **Dwight** gave at Dow. It's a fine orientation to where the action is.

Magnetic separations in chemistry
and biochemistry

172

☐

Have you ever really thought about all the energy forms you might use? **Hirschbein**, **Brown**, and **Whitesides** have.

Storing sunshine in salamis

182

☐

There's lots of heat involved in reversible phase change, so why not use it? **Marks** explains why not and then shows how.

Take your pick:
capital or energy

188

☐

When playing with flow sheets, you can win if you remember all the rules, says **Steinmeyer**.

129 The Industrial Chymist

☐

helps other chymists over the hump.

131 Heart Cut

☐

in which it's process modeling, antacids, and quality.

134 Write On

☐

in which we catch it for letting **Brezhnev** have a say.

180 The Science of the Possible

☐

in which **Weisz** handles data handily.

OBC The Last Word

☐

in which **Younglove** means "help" when she says Help Wanted.

CHEMTECH

The Innovator's Magazine MARCH 1982

- How IBM rewards employees** 202 ☐ Specific awards can go a long way to avoiding the question "What have you done for me lately?" says **Turner**.
- Electronic information centers are coming** 205 ☐ "Want to see five years of R&D output?" asked **Farone** as he pulled out the top drawer of his desk.
- Who needs foreign students?** 208 ☐ The cost-benefit ratio of educating foreigners is **Simon's** concern. It involves more than dollars and local needs.
- Start a business (?)** 211 ☐ A team—that's what **Friedberg** says it takes—a team in which the players combine individual skills.
- Engineering + medicine → Fluidotherapy** 215 ☐ Find a physician who understands fluosolids reactors or an engineer who grasps therapy? Never! So **Henley** teaches both.
- Chemistry museums of Europe** 221 ☐ Pack this lift-out section when you next go abroad and have an unusual trip, says **Wotiz**.
- A good look at wood's structure** 232 ☐ Realizing wood's potential for old and new uses is daily growing more imperative. **Gray** and **Parham** help us realize.
- Coal liquefaction** 242 ☐ Here's a status report on the donor solvent project written by **Wade**, **Ansell**, and **Epperly**.
- Precious metals in chemistry** 251 ☐ When a little does a lot, it can be noble and still economical. **Andersen** exemplifies.

193 The Industrial Chymist

- ☐ is worried about proliferation of reductionist philosophies at the expense of the synthetic orientation.

194 Write On

- ☐ in which we're told "Watt's wrong," Nader's right, and a lot more.

196 Heart Cut

- ☐ where you'll see a gene in all its glory and get a few other useful surprises.

199 The Best of '81

- ☐ in which the Leo Friend Award is announced.

201 View from the Top

- ☐ in which **Atkinson** traces "Science in America" and prognosticates.

229 Well Said

- ☐ in which **Schoenfeld** tells us where he's at.

OBC The Last Word

- ☐ in which you learn the real secret of aging.

CHEMTech

The Innovator's Magazine **APRIL 1982**

To publish or not to publish **266** Here's **Conway's** check list to help you decide.

☐

The Industrial Research Institute **268** Where R&D executives learn their craft is what **Larson** calls a "quiet but effective force."

☐

Invention and innovation **274** Surprisingly to many, invention is neither a necessary nor sufficient condition for innovation. **Saari** explains.

☐

A poor country chemist wonders about recent economic theories **280** "Would a reasonable technical person reach the conclusions economists have, given the same data?" asks **Riesser**.

☐

Epoxy resins containing fluorine **290** Now, if you really want a material to last just add some fluorine to it . . . in the right places. And **Griffith's** found some.

☐

Catalytic concepts in coal conversion **294** In his Murphree lecture **Mills** brings the reader up to speed on "new" fuels and talks about his new job.

☐

The second way to use The Second Law **306** So not all Btus are equal; so what do you do now? **de Nevers** gives you a choice.

☐

257 The Industrial Chymist

☐ has been had.

258 Write On

☐ in which we catch it with justification.

260 View from the Top

☐ in which **Jefferson** addresses the Council for Chemical Research.

263 Heart Cut

☐ in which is the heart of today's chemical technology.

285 The Division's Page

☐ in which **Taylor** talks about analytical chemistry as profession.

286 Random Samplings

☐ in which **Hahn** shows how to be sure how sure you are.

304 The Science of the Possible

☐ in which **Weisz** gets pretty far into the barrel.

OBC The Last Word

☐ in which **Butler** reaches new definitions.

The Innovator's Magazine MAY 1982

BOOOOOM!

326

... And celebrated it is; but the pyrotechnics are all chemistry, says **Girone**.

Making the desert bloom . . .
at a price

332

**Dowsing '82**

Two more real life stories round out **Sheridan's** view of "the next limiting resource."

Executive recruiters:
a directory

338

"We have been retained by a Fortune 500 firm to locate a top-flight technologist who . . ." **Whitaker** explains where such letters originate and how some end.

The business environment ahead
. . . and how to handle it

342

How to address the economic long wave is addressed by Assistant Secretary of Commerce Designate, **Merrifield**.

Cancer chemotherapy:
success and failure

347

In his Bristol Meyers Award address, front-line fighter **Skipper** goes to strategy . . .

targets and projectiles

349

. . . while his coworker **Montgomery** explains tactics.

Methanol: emerging uses,
new syntheses

358

In view of its complexity, the best bet for coal, **Frank** shows quantitatively, is to tear it down to CO/H₂ and go from there . . . via methanol.

How to spray with molten metal

364

It's called thermal spraying and **Thorpe** shows how to use it to fix surfaces.

R₃Si—a dandy leaving group

373

Silicon in organic chemistry? **Dunoguès** provides another string to the synthetic chemist's tool box.

How to select
polymerization reactors

380

There is life beyond the three-neck flask and resin kettle, **Gerrens** explores it.

321 The Industrial Chymist

explains why the planning process panics people.

322 Write On

in which the Russians catch it. Then there's a potpourri of thought provocation.

324 View from the Top

in which **Donley** addresses the Council for Chemical Research.

329 Heart Cut

in which there's something different. Can you spot it? Do you like it?

356 The Science of the Possible

in which **Welsz** wonders at the shape of things.

OBC The Last Word

in which **Ramadoral** reports on his last safety meeting.

Volume 12, No. 6, pages 321-384 ISSN 0009-2703

CHEMTECH

The Innovator's Magazine JUNE 1982

Thermal spraying
Page 364

Who's creative?

392

☐

To answer, chemist **Lyon** tested colleagues, and more important, tested tests.

How to judge a job applicant
(or be one)

396

☐

Few who interview (on either side of the desk) have been trained for the task. Management consultant **Wareham** provides such training.

A new corporate design

404

☐

Today's expectations, education, and externalities call into question the basic nature of corporations conceived in another age. Who better than **Forrester** to find a fix?

The politics of the
"Clean Water Act"

413

☐

Dowsing '82

In the 1970s Congress addressed environmental law and the proliferation of laws. **Linton** relates how the original law happened, timely now that it's up for review.

A theological view of
nuclear energy

420

☐

Some say that you can find "anything you seek" in the Bible (or in physics). Some say it (it) contains only "Truth." This was priest/physicist **Pollard's** challenge.

Nutrition and vitamin C

428

☐

If we knew "... how it acts at the molecular level" we'd feel a lot more comfortable using as much vitamin C as other species do. **Brin** provides rationale for our doing so.

How to select polymerization
reactors—Part II

434

☐

The theory laid out by **Gerrens** in Part I now proves useful.

Keeping up with the
instrument explosion

444

☐

Even if you don't use instruments you use their results, pay for them, wait for them, and question them. So **Settle**, **Pleva**, and **Jackson** are really addressing you.

385 The Industrial Chymist

☐

suggests where to look for gold.

386 View from the Top

☐

in which **Osgood** examines the purpose of the nonprofit research organization.

387 Write On

☐

in which trademark convention, inventorship, personal pronouns, filters, and formaldehyde are called into question.

389 Heart Cut

☐

in which **Kreps** and **Thyagarajan** found how to use membranes, singlet oxygen, ceramic paper, and prosthetic plastics.

424 The Science of the Possible

☐

in which **Weisz** tells us where the needle is in 28 orders of magnitude of a haystack.

OBC The Last Word

☐

in which **Teison** tells how to travel smart.

Volume 12, No. 7, pages 385-448 ISSN 0009-2703
CHTEDD

CHEMTECH (ISSN 0009-2703) is published monthly by the American Chemical Society at 1155 16th St., N.W., Washington, D.C. 20036. Second-class postage paid at Washington, D.C., and additional mailing offices. POSTMASTER: Send address changes to Membership & Subscription Services, P.O. Box 3337, Columbus, Ohio 43210.

Subscriptions—1-year prices: Members, \$20; Nonmembers (individual personal use), \$30; Companies, institutions, libraries, \$140; Students, \$10; Foreign subscribers add \$6 for postage. Send payment to ACS Controller, 1155 16th St., N.W., Washington, D.C. 20036. Single copies, \$13. Phone orders can be placed for printed, microfiche, and microfilm editions by calling, toll free, the sales office at (1)800) 424-6747 from anywhere in the continental U.S.

Can use Visa or Master Card. Rates above do not apply to nonmember subscribers in Japan, who must enter subscription orders with Maruzen Company Ltd., 3-10 Nihon bashi 2-chome, Chuo-ku, Tokyo 103, Japan. Tel: (03) 272-7211

Editorial matters: Refer all editorial matters to B. J. Luberoft, Editor, CHEMTECH, 48 Maple St., Summit, N.J. 07901, (201) 273-4923.

Advertising: Centcom, Ltd., T. Koerwer, Pres., 25 Sylvan Road South, Westport, CT 06881; (203) 226-7131.

Service: For change of address, send old label with new address to ACS Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210. Allow 6 weeks to effect change. Refer claims for missing issues, information on status of accounts, etc., to this office. Claims for missing issues will not be allowed if (a) notice of address change was

not received in specific time; (b) North American claim was made 90 days beyond issue date; (c) other claim was made one year beyond issue date

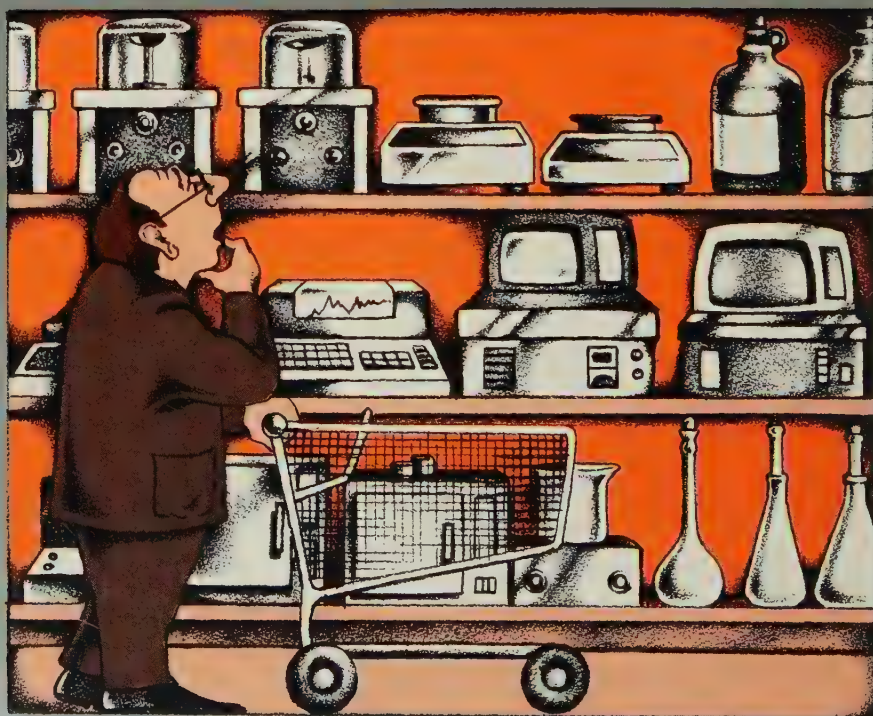

Disclaimer:—The American Chemical Society assumes no responsibility for opinions advanced by contributors to its publications. Views expressed in the editorials are those of the author and do not necessarily represent the official position of the Society

Reproduction: Permission is granted by the American Chemical Society to make reprographic copies for personal, noncommercial, or internal use. This permission does not extend to copying for promotional purposes, creating new collective works, resale, or to any material not copyright to ACS. For details, contact B. Friedman, ACS, 1155 16th St., N.W., Washington, D.C. 20036; (202) 872-4367

CHEMTECH

The Innovator's Magazine JULY 1982

- Conventional behavior** 458 ☐ "The only equipment needed is a shabby briefcase . . ." For what? Why, for Kansas City, of course . . . or elsewhere, says **Flory**.
- Sex at work** 462 ☐ There are enough women around the workplace now to make their presence felt. And felt it is. How? Read on.
- Psychological causes of the nuclear arms race** 466 ☐ Why We and They persist when both know there will be no winner is rationalized by psychiatrist **Frank**. Or is it?
- Is innovation always need-driven?** 470 ☐ Case studies provide **Quinn's** response.
- Whither the environmentalists?** 482 ☐ A dozen years ago **Duggan** founded the National Resources Defense Council. Here he prognosticates.
- Biomass $\rightleftharpoons$ Chemicals** 486 ☐ Only the word "biomass" is new. **Kovaly** reviews all things that are today crop-based.
- Build strong patents on strong notebooks** 490 ☐ Meticulous notekeeping is not a nuisance; it's the discipline that science and law impose to ensure thoughtful experimentation. **Behr** provides a how-to.
- Painting with electricity** 493 ☐ Here's a technique that protects air and water environments. **Roobol** shows how.
- Shocking reactions** 496 ☐ Sound is a form of energy that, when fast enough, strong enough, and concentrated enough, is called shock. **Owens** exemplifies how that kind of energy alters chemical reaction.
- Synthetic Fuels: Are they different?** 500 ☐ The forms of energy conversion devices have been exquisitely honed over the years to match available fuels. **Hochman** assesses the impact of changing fuels.
- Activating hydrogen with iridium compounds** 506 ☐ Homogeneous catalysts do indeed offer "certain unique advantages." **Crabtree** outlines some of them.

449 The Industrial Chymist

in which **Luberoff** shares what it's like to be color-blind.

451 Heart Cut

in which **Allen, Krebs, Roberts,** and **Thyagarajan** present innovative concepts

Dowsing '82**456 View from the Top**

of the American Water Works Association, whose president, **Miller**, talks about dilemma.

460 T & E

in which **Connolly** recommends the entertainment for those who have traveled to Kansas City.

478 Division Page

in which CHEMTECH boardman **Lavallee** celebrates the computer's invasion of the campus.

OBC The Last Word

in which **Minn** shows how to use a rainy day to tackle a real problem.

Volume 12, No. 8, pages 449-512 ISSN 0009-2703 CHTEDD

The Innovator's Magazine AUGUST 1982

Page 482

- Telecommuters** 519 ☐ Will cottage industry return? **Toffler** says yes . . . the electronic cottage, that is; computers are making commuting obsolete.
- SATs are ruining the GNP** 524 ☐ "College boards" measure how well people are able to perform. More important is what they don't measure, says **Lemann**.
- Consumerism: a balanced view** 528 ☐ How people learn how to buy is what concerns **Lloyd**, who teaches them.

Dowsing '82

- Use and reuse of water** 532 ☐ We need not consume water; we only need to use it, explains **Hales**.

- Photovoltaic unit operations** 540 ☐ Chemical engineering thinking is taking over in the solar business, and **Russell's** leading the way.
- Is the price right?** 546 ☐ What you charge for your product spells the difference between success and failure. **Monroe** relates cost, price, and perceived need.
- The engineering plastics business** 552 ☐ Materials-for-function is a good industry to get into. Or is it? **Kossoff's** analysis helps answer.
- Para-methylstyrene** 556 ☐ Here's a new industrial monomer and its polymers. Their portent is related by **Kaeding, Young, and Prapas**.
- Sampling for chemical analysis** 564 ☐ Simple: The analysis is no better than the sample but how to sample isn't simple, so you can learn from **Kratochvil** and **Taylor**.
- Activate C-H bonds** 571 ☐ Paraffins are inert. Right? Not when **Parshall, Thorn, and Tulip** use iridium complexes to catalyze alkane reactions.

513 The Industrial Chymist

☐ finds where to find the person "who knows . . ."

514 Write On

☐ in which economic policy is defended and a malapropism rears its ugly head.

515 View from the Top

☐ in which **Miller** asks you to help him regulate.

516 Heart Cut

☐

OBC The Last Word

☐ in which **Evans** confesses.

CHEMTECH

The Innovator's Magazine SEPTEMBER 1982

A hunter's guide through the jungle of analytical labs

580 Intrepid explorer **Kreps** groups analytical labs into seven species.

☐

Glass: A reflection

586 The chemist's relationships with glass are venerable, diversified, and important. **Martin** illustrates how some intertwine.

☐

Can a two-career family live happily ever after?

592 Part sensitive analysis, part how-to is this excerpt from the new book by psychiatrists **Greiff** and **Munter**.

☐

"Gas, mister, not gasoline"

598 "You may never have to visit a gas station again." Really? Cross country on less than \$10 worth of fuel? How? **Axworthy** explains.

☐

Dowsing '82

Bring water to the Dead Sea? Why? How?

602 In Israel it's said that the Sea of Galilee is sweet because it has an inlet and an outlet, while the Dead Sea is sour because it only takes—nothing flows from it. Although the plan **Sifrin** describes won't sweeten it, it will create a new flow of energy.

☐

A primer on finance

604 Projects work because they pay. Most that don't don't because of financial, not scientific, constraints. So, learn finance, say **Pogue** and **Lall**.

☐

Thiopropionates stabilize polyolefins

618 Although polyolefins are formal paraffins, they're really unreactive. **Brecker** shows how to fix that.

☐

Inhibitors of angiotensin enzyme

620 Molecular architects **Cushman** and **Ondetti** relate how they designed an antagonist that alleviates hypertension.

☐

The materials-energy symbiosis

625 As ores become less accessible, demands on finished metals grow . . . all in an uncertain energy future. What's happening, and could happen, is laid out by **Sadoway**.

☐

Getting sulfur out of gas

628 Beating the complex chemistry of sulfur first required understanding it in all its ramifications, but now the job's been done so well that a major part of the golden element is "synthesized." **Hyne** shows how.

☐

577 The Industrial Chymist

☐

faces the "make-or-else" decision . . . with his lawyer.

578 Write On

☐

suggests why chemists and engineers should talk to each other more . . . especially if they're women.

582 Heart Cut

☐

covers RCRA manuals and other gallstones plus a bunch of great books on gadgets you need.

609 Well Said!

☐

in which **Schoenfeld** handles the likes of "A number of my fingers grow number."

612 Guest Editorial

☐

in which **Johnston** airs one procedure for alleviating global nuclear neurosis.

OBC The Last Word

☐

in which **Mulé** warns that Japanese answer questions, not questioners.

Page 620

- Public relations for chemists** **648** ☐ Our image needs all the help it can get. Here's what ACS staff are doing under **Moore's** committee guidelines.
- Retire to, not from** **652** ☐ There is life after retirement and **Thirtle's** found it.
- Hildebrand's second century** **656** ☐ Sure, chemists can have fans, Mr. **Roberts**.
- What good is market research?** **659** ☐ Just get that information needed to drive your decisions, says **Kastens**, and you'll take the sweat out of market research.
- What? Americans enter world markets?** **662** ☐ Characterizing markets as **Hegeman** does has local as well as global values.
- Silicon sensors meet integrated circuits** **666** ☐ The technology used to carve out computing chips also makes tiny GC columns and more. **Barth** shows how.
- Cluster-derived supported catalysts and their use** **674** ☐ Direct conversion of syngas to ethanol is interesting, but **Ichikawa's** way of making catalysts is more so.
- Power-grade butanol** **681** ☐ There's more than one way to ferment biomass to fuel, says **Noon**.
- Enhanced oil recovery** **684** ☐ There are three ways to draw on the big bank accounts in the ground. **Shankland** explains how they compete with each other.
- Thermodynamic data banks** **691** ☐ One student said, "I like thermo because it tells you what's possible." Organizing the data to do that is what interests **Garvin, Parker, and Wagman**.
- Desorption methods in mass spectrometry** **698** ☐ No longer must one rule out the use of the mass spectrometer because the unknown is a solid. **Bursey** comments on the new horizon.

641 The Industrial Chymist☐ wonders if it pays to get organized.**643 Heart Cut**☐ in which **Roberts** and **Small** pick up on P-doped Si, newer epoxys, and restauranting.**646 View from the Top**☐ in which **Yankwich** looks across the industry-academe abyss to learn why people move out of research, but seldom move into it.**689 The Science of the Possible**☐ in which **Welsz** discovers how square science really is.**OBC The Last Word**☐ asks "Where did you come from?" . . . of vegetables.
